Unity Developer with over 5 years of experience in gameplay and systems, currently expanding technical expertise into Tools Engineering within Unreal Engine 5. A collaboration-focused professional acting as a technical facilitator between engineering and art teams. Specialist in providing proactive support to unblock colleagues' workflows, ensuring robust deliveries through knowledge exchange and collaborative resolution of complex problems.

Experience

SEPTEMBER 2024 – PRESENT

Development Lead / GreyDotLab, Barueri, São Paulo (Remote) Leading an agile development team focused on creating pipeline optimization tools for Unreal Engine 5. Acting directly on solution architecture to integrate artistic needs with technical feasibility, using Blueprints and Python to eliminate repetitive tasks. Developed an automation system for Sequencer and asset import that reduced production costs by 10%, ensuring the art team has the necessary technical support to focus on visual quality.

MAY 2022 – JANUARY 2026

Senior Unity Developer / Medroom, São Paulo (Remote) Worked on the full development of *Clinical Case*, a VR medical care simulator, evolving from Junior to Senior level through consistent delivery. Implemented complex examination and anamnesis systems, working in close partnership with the QA team to identify and resolve critical bugs. Actively collaborated with the UI/UX team on the complete restructuring of the user interface, ensuring the technical fidelity of the design across three major product updates.

JANUARY 2021 – JANUARY 2022

Trainee Unity Developer / LIGA Facens, Sorocaba, São Paulo (Remote) Participated in the development and maintenance of licensed mobile games (SBT), including "Poliana Cake Crush" and "Show do Milhão". Managed the full lifecycle of hyper-casual projects, from gameplay programming to the build process and store publication, always seeking to learn from the senior team and contribute to the efficiency of version control processes.

Skills

Unity 3D/C# (5+ years) • Unreal Engine 5 (Blueprints & Python Tools) • Pipeline Automation • Git & Version Control • Technical Leadership • Technical English (Advanced Reading, Listening, Writing) • Adobe Photoshop & Affinity • Time Management & Autonomy.

Education

Continuous Education & Self-Taught Focus on Software Engineering and Game Development Specialization courses on platforms such as Alura and Udemy, with practical emphasis on game engines, programming languages, and development methodologies.

Activities

Gaming • Piano • Family Travel • Technical Reading • Podcasts & Audiobooks
